

What is Globalization?

It is the growing connection and dependence of countries around the world through **trade, technology**, and the **sharing of ideas**. It allows **people, money**, and **goods** to move faster and more easily across national borders than ever before.

Views on Globalization

The Hyperglobalist

Views globalization as a real, transformative new era defined by a **borderless economy**, the **decline of the nation-state**, and **global cultural convergence**.

STEFAN A. D. FLORES, MBA © 2026

Views on Globalization

- **Borderless Economy:** Believes a single, unified global market now replaces distinct national economies.
- **Declining State Power:** Argues that national governments are losing their authority and relevance as multinational corporations and global financial forces take over.
- **Cultural Homogenization:** Predicts the creation of a uniform global culture driven by Western media, consumer brands, and technology.

Views on Globalization

The Skeptic

Views the current global integration is **deeply exaggerated, geographically concentrated, and controlled by powerful nation-states** rather than a borderless economy.

STEFAN A. D. FLORES, MBA © 2026

Views on Globalization

- **Overstated Phenomenon:** Contends that true globalization is a myth and that current levels of world trade are not historically unique compared to the 19th century.
- **Centered on Regions:** Sees the world economy split into major regional blocs (such as North America, Europe, and East Asia) rather than a fully integrated globe.
- **Strong National Governments:** Maintains that nation-states remain the primary and most powerful actors in controlling trade and protecting domestic policies.

STEFAN A. D. FLORES, MBA © 2026

Views on Globalization

The Transformationalist

Views globalization as a **massive, long-term historical process** that fundamentally **reorganizes** modern states, societies, and global power. They argue that while the world is deeply interconnected, the future path of globalization is **open, uncertain, and uneven**.

STEFAN A. D. FLORES, MBA © 2026

Views on Globalization

- **Profound Social Change:** Views globalization as a real, highly powerful force that deeply alters modern social, political, and economic life..
- **Redefined State Power:** Argues that nation-states are not dying out, but are instead changing their roles and finding new ways to exercise authority.
- **Uncertain and Uneven Future:** Rejects a fixed path, seeing globalization as an open-ended process that creates complex patterns of global winners and losers.

History of Globalization

Early Roots and the First Wave

Ancient & Archaic Networks: The Silk Road and Spice Routes, connecting Asian, African, and European markets.

Age of Discovery: 15th-to-18th-century European maritime exploration launched the Columbian Exchange and transatlantic trade.

19th-Century Wave (1870–1914): Driven by the Industrial Revolution, steamships, railroads, and the telegraph created the first peak of deep international economic integration. This wave collapsed due to World War I and the Great Depression.

History of Globalization

The Post-WWII Revival and Contemporary Era

Bretton Woods & Global Institutions (1940s): The International Monetary Fund (IMF) and the World Bank are twin global institutions created at the 1944 Bretton Woods conference in Washington, D.C.

The Shipping Container (1956): Standardized freight shipping dramatically cut transport costs and accelerated physical commerce.

Digital & Late 20th-Century Integration: The fall of the Soviet Union, free-market trade policies, and the birth of the internet paved the way for hyper-connected modern digital economies.
